Logix 3000MD Series
Digital Positioner

Experience In Motion

Superior Performance and Reliability

Introducing the Flowserve Logix™ 3000MD Series Digital Positioner

The Flowserve ® Logix™ 3000MD series high-performance digital positioners utilize state-of-the-art piezo technology to provide superior performance and reliability. This is accomplished through the use of a powerful 32-bit microprocessor and a proprietary two-stage electronic relay. Among the Logix 3000MD series more attractive features are the on-board QUICK-CAL™ button, DIP switches, Jog buttons, and variable gain selector. These features allow the user to complete setup and calibration of either diaphragm or piston operated valves in a couple of minutes, without the need of additional handheld devices or software.

The Logix 3000MD series positioners offer valve status updates at a glance using the highly visible LEDs. Users can easily determine if a valve or actuator is functioning properly, and quickly diagnose any problems using the smart LED blink codes. This means that maintenance personnel can provide a visual check of the valve status without having to remove the cover or connect a HART handheld device or maintenance PC/laptop.

Predictive diagnostics is available using the ValveSight software available through FDT/DTM technology. ValveSight is a diagnostic solution for control valves that can be seamlessly integrated into most host control and/or plant asset management systems. The power of ValveSight is in the intelligent diagnostic engine which is constantly monitoring the valve, actuator, positioner and control signal for patterns of behavior that may indicate a problem and provides actional advice proactively.

Inside the Logix 3200MD

The Logix 3000MD Series Digital Positioner - How It Works

Logix 3000MD Positioner Overview

Figure 1: System Positioning Algorithm for Logix 3400MDDigital Positioners

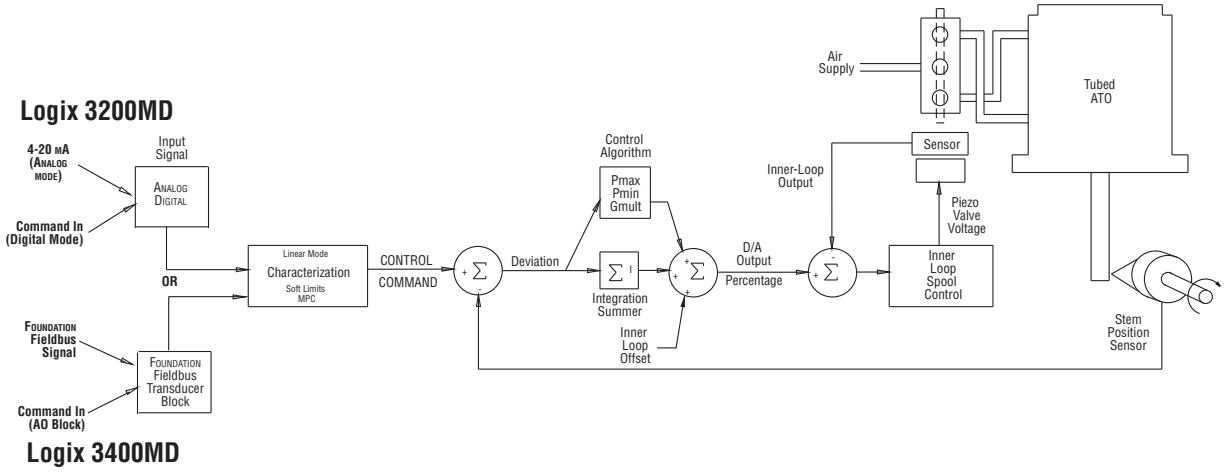

Figure 1: Logix 3000 Series *Digital Positioners Schematic (air-to-open configuration)*

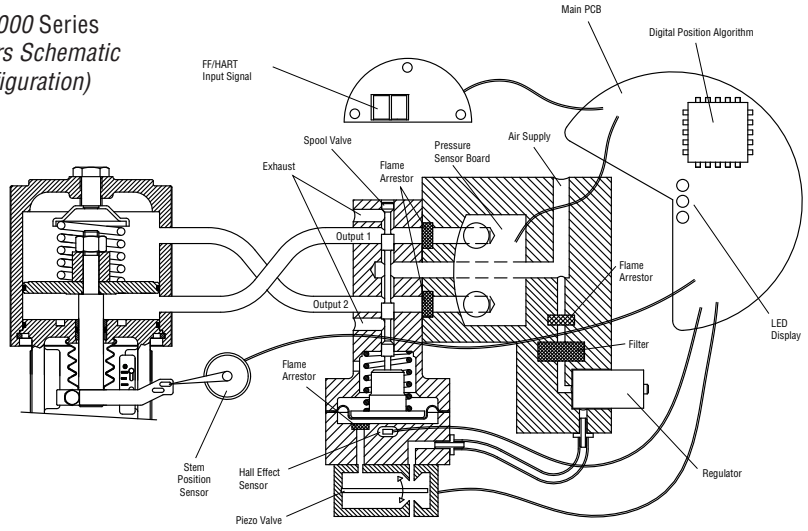

Tuning

Unlike other positioners that have only one set gains to set the response of the positioner, the Logix 3200MD positioner uses a multi-variable variable gain tuning algorithm. This allows the positioner to make large step changes with minimal overshoot, while achieving the resolution to respond to very small step changes.

The Auto Tune procedure cycles the actuator to produce a measured response and selects those gain values that provide appropriate actuator performance. The Auto Tune function includes a gain modifier selector that can be used to increase or decrease the calculated gain in order to achieve optimal performance.

By setting the Auto Tune on/off DIP switch, the tuning mode can be changed from auto to manual. The Logix 3000MD Series positioners provide several preset gain settings with a locally adjustable gain set selector directly from the user interface on the positioner. If custom settings are desired, tuning sets can be modified with a handheld or ValveSight, to accomodate a wide range of actuator sizes and types.

The Logix 3400MD for FOUNDATION Fieldbus Applications

Complete local configuration, on any valve/actuator and local.

FF Simulate – Run a control strategy without process

FF Write Protect – Locks out unauthorized writes to NVRAM

FOUNDATION Fieldbus made easy.

(In OOS) Calibrate stroke and adjust tuning without entering the Transducer Block —Updates the Block when complete.

36 status and alert and messages displayed locally via three easy-to-read LEDs

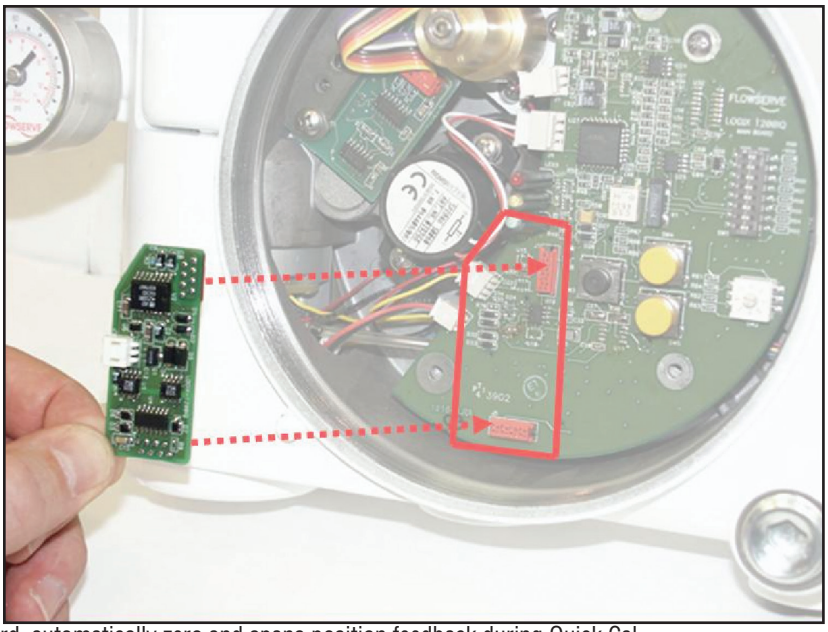
The Logix 3200MD for HART Applications

Complete local configuration, just like the Logix 3400MD, but HART protocol

- Local status and alert messages
- Tuning (Auto Tune function and manual adjustment)
- Jog buttons to manually adjust 100% position
- Easy-to-install 4-20 mA analog feedback card option



Simple plug-in AO card, automatically zero and spans position feedback during Quick Cal

ValveSight Dashboard for Logix 3200MD or 3400MD Advanced DTM and Pro diagnostics

FDT Group Certified

The Logix 3000MD Series Positioners – no software or hand-held device required... easy as 1, 2, 3

With the Logix 3400MD, function blocks are no longer required to set up, configure and perform a simple stroke calibration. The 3400MD can be set up with 9-32 VDC supply and 45 psi (min.) air supply on any valve/actuator platform.

Calibration, configuration and tuning parameters from the local interface will be automatically updated in the Transducer Block on the Logix 3400MD. Local setup and calibration that does not require a link to a host controller, PC or hand-held device, as well as local validation that setup is correct, make any FOUNDATION Fieldbus™ installation easy and straightforward.

When the 3400MD is in OOS (Out Of Service mode), the local interface shown to the right is accessible and setup can be carried out through the following steps:

Common Configuration Steps

The Logix 3200MD can be set up with 10 VDC milliamp current supply current and 45 psi (min.) air supply on any valve/actuator platform.

Calibration, configuration and tuning parameters from the local interface will be automatically updated in the HART registers on the Logix 3200MD. Local setup and calibration that does not require a link to a host controller, PC or hand-held device, and local validation that setup is correct make any HART™ installation easy and straightforward.

With the Logix 3200MD, the local interface shown to the right can be used to set up the unit in seconds through the following steps:

1. Make sure the mechanical linkage, air tubing and actuator mounting are correct.

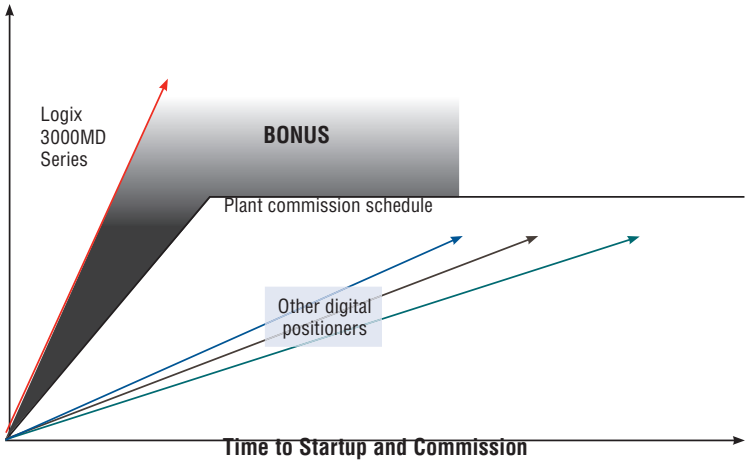
2. Set the configuration switches to the desired operation of the valve/actuator.

3. Set the quick calibration switch to Jog or Auto. In Jog, the 100% position can be manually adjusted using the yellow up and down buttons after Re-Cal is pressed. In Auto, the positioner finds the 100% position and calibration is complete. LED blink codes will guide the user through the process. Four green blinks (GGGG) or (GGGY) at the end of the sequence confirm that the calibration was successful.

4. If needed, the GAIN switch located to the right of the jog buttons will speed up or slow down the positioner's response to command changes. With the Auto Tune configuration switch set to "On", the positioner's algorithm will select a gain with no over-shoot. The 'E" position of the rotary GAIN dial indicates "neutral" with respect to gain adjustment. Turning clockwise from E to H and will speed up the response. Tuning counter-clockwise from E will slow it down, with A being the slowest response.

Time is Money

Shorter commissioning time gets you up and running, making money faster



3000MD Series Facts

The local interface in the 3000MD series positioners and the two way communication capability allows the user to quickly commission loops.

3400

- Three versions: Basic, Advanced (Advanced includes pressure sensors), and Pro (Pro includes pressure sensors and full featured valve diagnostics)
- ITK - CFF 4.6, 5.0
- DD available at www.fieldbus.org or www.flowserve.com
- Stores a valve signature onboard in NVRAM
- Linkable Position Feedback as part of the AO Function block.
- Contains: AO, PID, 2-DI, DO, OS, IS function blocks.
- Onboard temperature sensor to measure local positioner ambient
- Stroke speed limiter (configurable in transducer block)
- Stainless steel version available
- DTM Available

3200

- Three versions: Basic, Advanced (Advanced includes pressures), Pro (Pro includes pressure sensors and full featured valve diagnostics)
- HART Command 1, 3, 9, 33 & 48
- Burst Mode available to continuously transmit
  - Position command analog loop current
  - Final value of command after characterization
  - Supply pressure (advanced), Temperature (basic)
  - Stem position in percent
- Onboard temperature sensor to measure local positioner ambient
- Stroke speed limiter (configurable through HART)
- Stainless steel version available
- Enhanced Device Description for advanced signature diagnostics
  - Step test, friction test, HRL, data logger
- DTM Available

There's a Flowserve Expert Inside - ValveSight FDT/DTM Technology

Flowserve's ValveSight DTM software helps manage field devices by combining the features of field network hardware and the Hart (3200MD) or Foundation Fieldbus (3400MD) communication protocols using FDT/DTM technology with the Logix 3000MD series positioners. ValveSight is a complete software package, featuring a unique and easy to understand health status of the device that shows not only problems, but the magnitude of developing problems as well. ValveSight also has configuration and calibration screens to fully support the Logix 3000MD positioner family. Additionally, the user can access customized reports for all configuration, calibration and event data. Flowserve's ValveSight DTM opens the 'window' to the device and allows immediate views with live feedback on all active device sensors including valve stem position, control signal, friction, response time and other important system metrics.

ValveSight DTM software enables communication between the software and field device networks using the HART or FF protocol and provides access to the 24/7 diagnostic information from field devices. Using FDT/DTM technology maintenance personnel can access any Logix 3000MD series positioner on the network from a single workstation. Additionally, the software has capability to store configuration and calibration history and view event logs for each digital positioner accessible through the network.

Diagnostic Engine

Users can now obtain a new level of detailed real time diagnostic information with ValveSight DTM software. ValveSight features an "Expert Inside' performing real time on-line diagnostics 24 hours a day, 7 days a week. The diagnostic assessment of the 'expert inside' is instantly displayed on the local interface and through the ValveSight DTM software. The 'health bars' in the Dashboard view instantly indicate any developing issues and quickly direct the user to the implications and solutions for each problem. The system automatically prioritizes alarms to direct the user to the root cause.

Configuration Management

ValveSight DTM software also allows the user to easily upload a configuration from the positioner. This means that a new replacement positioner can be identically configured with the simple click of a mouse once the correct configuration has been identified. ValveSight enables users to edit individual configurations and print a positioner configuration report.

21-Point Characterization Curve

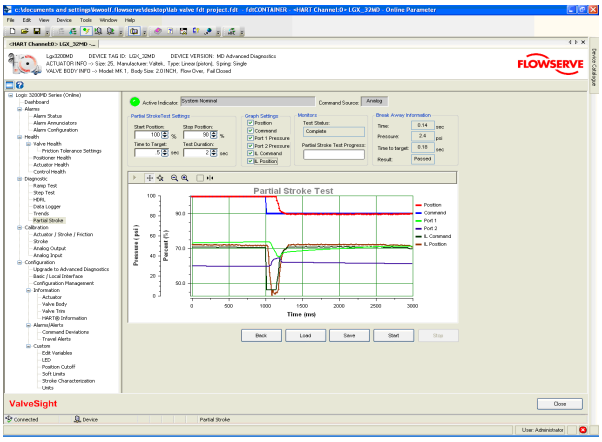
With ValveSight DTM software, the user can adjust a 21-point characterization curve to change the response of the positioner in order to meet the process requirements. The output of each control point is independent, allowing the user to create a custom curve with very high resolution. This customized curve can be saved in the memory of the Logix 3000MD positioners, and either activated or overridden with a simple on-board selector switch.

Signatures

The Logix 3000MD positioners are designed to assure that data is easily gathered, stored and compared to historical valve data so the user can determine the performance of critical valves.

With ValveSight DTM software a user-defined signature ramp or step response test can be generated with a Logix 3000MD positioner. Signatures can be saved and cataloged (and later retrieved) for comparison with a more recent signature.

A special partial stroke signature function wil automatically test the valve/actuator and give a pass/fail indication.



Positioner Performance

Static performance and accuracy measures such as hysteresis, deadband, linearity, and repeatability can be obtained with the Logix 3000MD positioners. These values can be graphically depicted, stored and later retrieved for comparative analysis.

The Logix 3000MD Positioner Specifications

Specifications for Logix 3400MD

Table I: Electrical Specifications

Power Supply	Two-wire, 9-32 VDC FF compatible
IS	Fisco compliant
Communications	FF Protocol ITK 4.6x, 5.0
Operating Current	23 mA
Maximum Voltage	36.0 VDC

Table II: Environmental Conditions

Operating Temperature Range	Standard	-40° to 176°F (-40° to 80°C)
Transport and Storage Temperature Range	-40° to 176°F (-40° to 80°C)	
Operating Humidity	0 - 100% non-condensing	

Note: The air supply must conform to ISA Standard ISA 7.0.01 (a dew point at least 18 degrees Fahrenheit below ambient temperature, particle size below five microns—one micron recommended—and oil content not to exceed one part per million).

Table III: Physical Specifications

Housing Material	Cast, powder-painted aluminum or stainless steel
Soft Goods	Buna-N / Florosilicone
Weight	8.3 pounds (3.9 kg) aluminum 20.5 pounds (9.3 kg) stainless steel

Table IV: Positioner Specifications

Deadband	<0.1% full scale
Repeatability	<0.05% full scale
Linearity	<0.5% (rotary), <0.8%, (sliding stem) full scale
Air Consumption	<0.3 SCFM (0.5 Nm^3/hr) @ 60 psi (4 bar)
Air Supply	30-150 psig (ISA 7.0.0.1 compliant)
Air Delivery	12 SCFM @ 60 psi (0.27 Cv)

Specifications for Logix 3200MD

Table I: Electrical Specifications

Power Supply	Two-wire, 4-20 mA 10.0 to 30.0 VDC
Compliance Voltage	10.0 VDC @ 20 mA
Effective Resistance	495 Ω @ 20 mA Typical Add 20 Ω when HART communication active
Communications	HART Protocol ITK 5,6
Minimum Operating Current	3.6 mA without AO board 3.7 mA with AO board
Maximum Voltage	30.0 VDC

Table II: Environmental Conditions

Operating Temperature Range	Standard	-4° to 176°F (-20° to 80°C)
	Low	-40° to 176°F (-40° to 80°C)
Transport and Storage Temperature Range	-40° to 176°F (-40° to 80°C)	
Operating Humidity	0 - 100% non-condensing	

Note: The air supply must conform to ISA Standard ISA 7.0.01 (a dew point at least 18 degrees Fahrenheit below ambient temperature, particle size below five microns—one micron recommended—and oil content not to exceed one part per million).

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can (and often does) provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Operation Maintenance (IOM) instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.
