VIBCODE vibration transducer

VIBCODE is an intelligent sensor system that identifies measurement points by use of coded measurement studs. The patented VIBCODE transducer is attached to the coded measurement stud locked using a bayonet catch. The rigid connection at the measurement point ensures a loss-free transmission of vibration signals, and bearing signals (shock pulse). The electronics within the handle amplifies the signal and transmits the measurement point data to the measurement device.

Application	Universal Magnetic Bracket	
Live Trend		Magnetic bracket mounted on machine housing. Standard bracket for the measurement of positional changes using the Live Trend function.
Shaft alignment		Magnetic bracket mounted on coupling flange. Laser beam is directed through a bore hole In the case of couplings with respectively large bores, the magnetic bracket can replace the complete chain-type bracket. In this case, the laser beam is directed through a bolt hole. Thus, the sensor system does not protrude over the rim of the coupling.
Bore measurement		Laser mounted outside of the bore. Laser beam is directed into the bore, but can be rotated by 180°.

Application	Universal Magnetic Bracket	
Bore measurement		sensALIGN 5 sensor* with sensor holder and plunger mounted on magnetic bracket. Adjustment to greater diameters via longer posts. * without integrated BT module An optionally available sensor holder and a matching plunger are required for use as measuring fixture. The magnetic bracket is mounted to the outside of the bore. If space is tight and if used as measuring fixture, the posts can be axially moved towards the front.
Dimensions	57 x 163 x 32* mm (L x W x H) *Height with the mounting brackets pushed together; maximum height depending on length of posts

Bore	UPB - universal pointer bracket	
Magnetic		
	The UPB can be placed in the bore or on the front face. Strong magnets secure the UPB; two sliding studs provide additional support for the measuring fixture when mounted outside of the bore.	The measuring probe is lowered onto the surface and moves the sensor into measuring position.

Bore	UPB - universal pointer bracket		
Magnetic, D: ≤ 810 mm			
	Additional components extend the area of application of the UPB to bores with larger diameter.		The measuring probe and sensor bracket are stabilized using additional components.
Non-magnetic, D: ≤ 810 mm			
	In the case of non-magnetic surfaces, the UPB is mechanically secured in the bore using the universal mounting bridge and the mounting bridge with eccentric head.		The UPB is mechanically secured on the front face of the bore. The sliding studs on the eccentric head and the universal mounting bridge are used as pads.

Universal Mounting Bridge

This mounting bridge can be diversely used for bore measurements. It is light-weight, consists of a few individual components only and can be quickly mounted using magnetic clamping feet. The universal mounting bridge can be used as laser/sensor holder or as measuring fixture for large half-shells.
